(Bretton Woods Project), “Foreclosing the future: Examining 20 years of the World Bank’s environmental performance” (2013), available online at <https://www.brettonwoodsproject.org/wp-content/uploads/2013/10/At-Issue-Bruce-Rich-FINAL.pdf>.

124 Between 1994 and 2009, MDBs and ECAs funded at least 88 new and or expanded coal power plants. In the latter years of that window approximately one third of MDB funding went into areas like energy, mining, industry and transportation, while over a third of ECA lending went to climate sensitive sectors like power, industry, mining and infrastructure. Between 2000 and 2019, 40% of CDB’s and 36% of China Exim’s overseas lending for “power generation” was allocated to coal-fired and large hydropower plants. Between 2011–2016, 61% of World Bank lending for renewable energy supported climate destructive large hydro over new renewables. See, for e.g., Environmental Defense Fund, “Foreclosing the future” (2009), available online at https://www.edf.org/sites/default/files/9593_coal-plants-report.pdf; LAS–Understanding CDB; International Rivers, “The World Bank and dams” (2016), available online at https://archive.internationalrivers.org/sites/default/files/attached-files/intriversfactsheetworldbanklending_2016_3.pdf.
